City of Montréal - Doctoral and Postdoctoral Fellowships

Launch of the City of Montréal Graduate Scholarship Program

The City of Montréal is proud to announce the launch of a new graduate scholarship program offering five fellowships of $10,000 each to support students relocating from the United States to Montréal to pursue a PhD or postdoctoral research in the following urban-related fields:

- Infrastructure resilience to climate change
- Artificial intelligence and infrastructure
- Infrastructure management and financing
- Housing
- Homelessness and safety

Higher education institutions in Montréal will provide the City of Montréal with a list of newly admitted students who meet the eligibility criteria and who have resided in the United States up to 2025.

Applicants will be required to provide:

- Proof of residence in Montréal,
- Proof of enrollment in a participating institution confirming that they will begin their studies in the Winter 2026 term,
- A statement demonstrating the relevance of their research to the urban issues listed above.

The City of Montréal will then select the five recipients of the fellowship.

Successful candidates will be notified individually in April 2026.
